

MEASURING LITTLE FEET – Do It Yourself

It is extremely important that your child wears the right size of shoes. To determine the correct size yourself, do the following:

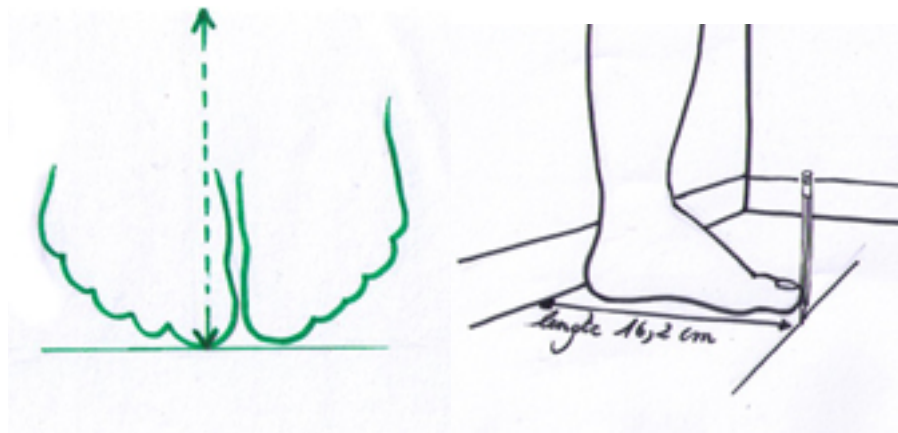

STEP 1

Put both bare feet of your child on a piece of paper and draw the outline. It is important that your child is standing upright.

STEP 2

Determine the distance from the tip of the big toe to the heel, for both feet.

STEP 3

Take the largest foot as a reference, add 1 cm (0,375 inches) extra growth space.

STEP 4

Check the overview for the corresponding shoe size.

Conversion table:

Euro Sizes (Anna Pops' sizes)	US Sizes	UK Sizes	CM	Inches
Baby shoe size conversions (0 - 12 months) *				
15	0	0	7.9	3.125"

39	7	6	24.8	9.75"	9

* All age/size ranges are intended for general reference and are to be used as a guide only; age and size will vary.

** Children's shoes are built on a narrower last than women's shoes. Order your usual size, but expect the fit to be less roomy than a traditional women's shoe. **DO YOU HAVE ANY DOUBT ABOUT THE SIZE, please contact us: info@annapops.be**

EXAMPLE:

The measured distance of the feet from heel to tip toe: 15,4 cm (6 inches; (left foot)) – 15,8 cm (6,25 inches; (right foot)). From the largest base 15,8 cm (6,25 inches) + 1 cm (0,375 inches) is 16,8 cm (6,625 inches). You select size 27 (EU sizes) = 10,5 (US sizes).

* Brands and models may slightly differ. In our webshop, we describe the shoe dimension and how it fits (normal, large, small). If you are unsure about the right size, please feel free to contact us. We will measure the inner size of the shoe and advise you about the right size.

A child's foot grows from size 18 to size 39 on average in 14 years time. That's at least 21 sizes with an average size of 1.5 per year. This is not always gradual.

Age growth rate per shoe size

0 - 3 years 4 month

4 - 5 years 6 month

6 - 7 years 8 month

8 - 10 years 10-12 month

11 - 13 years 3-4 month

This is the average growth rate. Of course, no child is standard. A growth spurt of one size in two months is also common. Children do not often indicate that shoes are too small, since the ends of the nerves are not yet well developed. Frequently check the size of the shoe. If the shoe has a removable insole, you can put the foot of your child on the sole and see if there is enough space (at least 6 mm between the big toe and toe shoe). If in doubt, measure your child's feet through a professional sizing device.
